

Request: The City of Dos Palos would like to upgrade and add to the existing Wastewater Treatment Facility that was last upgraded in 1990.

Description: The Wastewater Treatment Facility is in need of upgrades and additions to be able to handle the volume of customers we currently have and will have. Some of the items that need to be addressed are the ponds, aeration basins, sludge pit, and the main building. The current building we are working out of does not meet energy standards and does not have a functioning lab to adequately test the wastewater.

Necessity: Our Wastewater Treatment Facility not only provides service to our city residents, but provides service to the residents in the Midway Community Service District and residents in the South Dos Palos Community Service District.

ng request: \$30,000,000

This request includes building additional ponds, building new aeration basins, building a new sludge pit, and constructing a new main building with a lab.
